

## 3J Collet Block

### High-Pressure, Hydraulic, Double Acting, Dead-Length

Part No. 7799-00-00-000093

#### Specifications

- Maximum operating pressure – 5000 psi (344 bar)
- Draw tube force – 1.9 x line pressure
- Collet capacity – 3J { $1/64$ " to  $1/4$ " (.39 to 44.45mm) round}
- Thru-hole in base
- Four thru-holes for mounting with  $3/8$ " screws
- Two  $3/8$ " (9.52mm) dowel holes in bottom of base
- Two SAE-4 ports
- 2-position, 4-way control valve recommended (not included)

#### Safety

- Do not over tighten the mounting hardware or the plumbing fittings.
- When installing a collet in the closer, do not over tighten the collet.
- **Do not exceed maximum operating pressure of 3684 psi (253 bar).**
- Make sure that the collet retains your material when the closer is closed.

#### Application

This 3J collet block is a stationary unit with a double-acting cylinder. It is effective on machine and assembly operations that require reliable clamping and unclamping. Use the collet block as a single unit or mount multiple closers on rotary tables, pallets, fixtures or tombstones for increased productivity.

#### Installation

1. Mount the collet block to a rigid flat surface.
2. Plumb your first supply line using 5000 psi (344 bar) rated  $3/8$ " OD steel tubing to the CLAMP SAE-4 port of the collet block and the normally OPEN  $1/4$  NPTF port of your hydraulic control valve.
3. Plumb your second supply line using 5000 psi (344 bar) rated  $3/8$ " OD steel tubing to the UNCLAMP SAE-4 port of the collet block and the normally CLOSED  $1/4$  NPTF port of your hydraulic control valve.
4. Plumb your hydraulic supply to the  $1/4$  NPTF pressure port of the control valve.
5. This configuration maintains a closed collet until the valve is actuated.

#### Operation

1. Remove the hydraulic supply from the valve.
2. Loosen the collet locking screw until the tip does not protrude into the piston guide threads.
3. Put a witness mark on the face of your collet in-line with the collet groove and then insert the collet in the top of the collet block.

### 3J Hydraulic High-Pressure Collet Block Instructions B-138

4. Using the collet wrench, turn the collet clockwise until it contacts the piston taper.
5. Turn the collet counter clockwise until the collet witness mark lines up with the locking screw.
6. Tighten the collet locking screw. Do not overtighten.
7. To close the collet closer, insert a workpiece in the collet, and connect the hydraulic supply to the control valve.

**WARNING: Do not close the collet closer without a workpiece in the collet.**

8. Adjust your hydraulic supply pressure to a level that assures effective workholding only. Continuously operating the closer at maximum pressure will decrease the service life of the seals and collet.

**WARNING: Pressure to this closer above 3684 psi (253 bar) may overstress the 3J collet.**

9. To open the collet, actuate the valve.

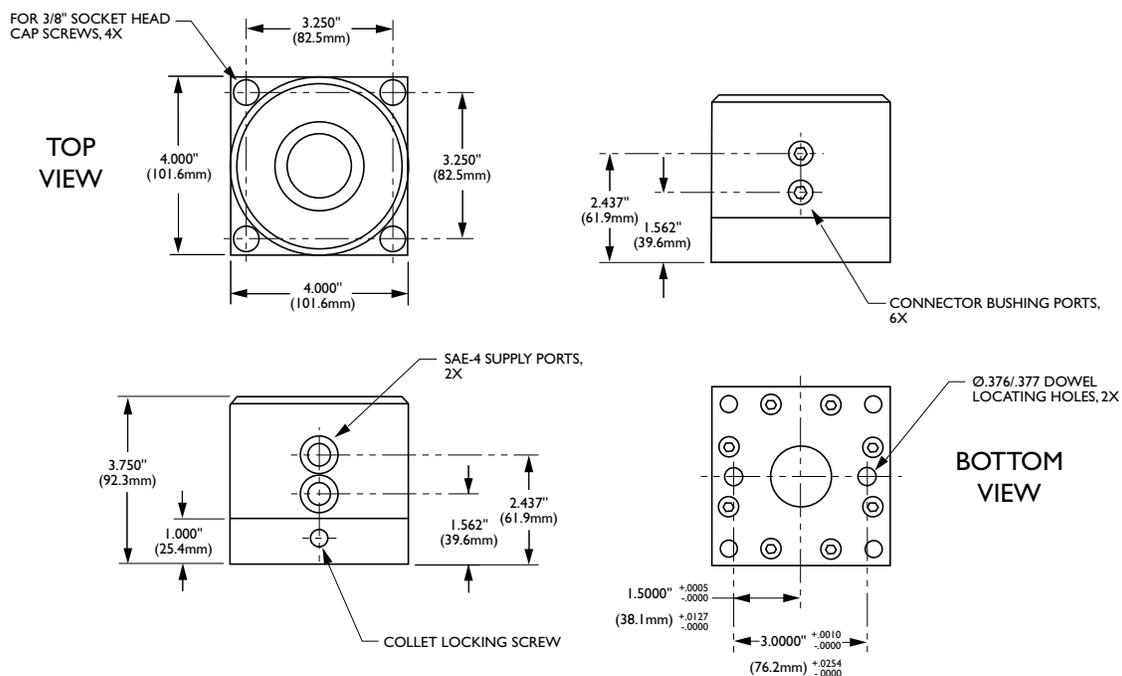

## Maintenance

If, over a period of time, you experience a decrease in clamping force even though hydraulic pressure remains unchanged, remove the collet block from service, disassemble, and replace any damaged or worn o-rings.

## Warranty

The products furnished hereunder are guaranteed by Hardinge Inc. against any defect in material or workmanship for a period of one (1) year from date of shipment when owned by original buyer or first user, and maintained and operated under normal conditions. Any products hereunder not manufactured by Hardinge Inc. are warranted only to the extent of the original manufacturer's warranty. Parts found to be defective in material or workmanship under this guaranty shall be repaired or replaced without charge, F.O.B., original point of shipment provided prompt notice of the defect is given and compliance with the terms of this guaranty are established. HARDINGE INC. SHALL BE LIMITED STRICTLY AND WHOLLY TO THE FOREGOING.

In no event shall Hardinge Inc. be liable for consequential or incidental damages or for other costs, expenses, or damages incurred by you attributed to any item sold hereunder.

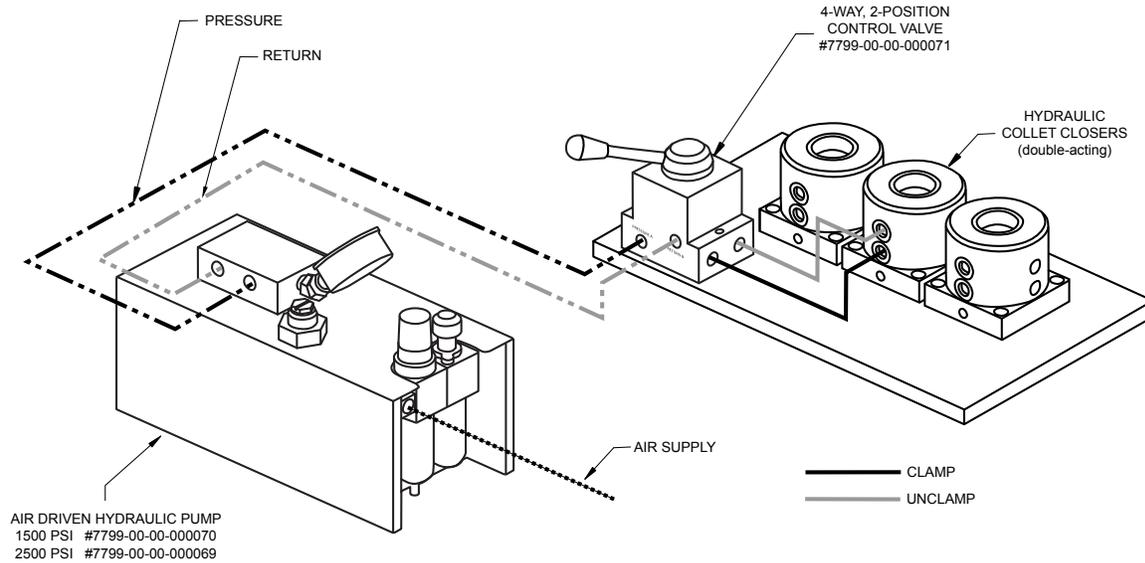

Part No. B-0009500-0138

### 3J Hydraulic High-Pressure Collet Block Instructions B-138

#### Example of a typical hydraulic configuration

Components include a pump, control valve and three hydraulic collet blocks supplied by Hardinge mounted on a customer machined fixture plate. (schematic shown in clamp position) 5000 psi (344 bar) rated hose/tubing is recommended.

Dimensions for mounting holes are available on the installation instructions online at [www.hardingetooling.com](http://www.hardingetooling.com)

#### Example of a quick disconnect hydraulic configuration

Components include a pump, control valve, accumulator, quick disconnect handle, manifold with check valve and three hydraulic collet blocks supplied by Hardinge on a customer machined fixture plate. The control valve should mount outside of the machine with the pump or on the outside wall of the machine. The quick disconnect with check valve allows you to remove the hydraulics while in the clamp mode – ideal for preloading pallets. An accumulator is required when using the quick disconnect product. (Schematic shown in the clamp position) 5000 psi (344 bar) rated hose/tubing is recommended.

Dimensions for mounting holes are available on the installation instructions online at [www.hardingetooling.com](http://www.hardingetooling.com)
